Research opportunities to help your patients...

Is your patient becoming frustrated and not responding adequately to standard therapy?

Strongly consider referring the patient for a research clinical trial:

We offer a \$200 dollar referral fee to you per patient that meet criteria and are screened.

Our staff can come to your office and help you pre-screen patients that will be eligible.

Study patients receive all study related care for free and are reimbursed for transport and other costs.

Current studies offered:

1. COPD Exacerbation studies.

- a. Patients with COPD with exacerbations (1 hospitalization or 2 requiring steroids and/or antibiotics) per year.

2. Asthma Exacerbation studies.

- a. Short study of 3 months looking at airway changes for eosinophilic asthmatic patients requiring biological therapy.
- b. *There is **no placebo** in this trial. Patients all receive benraluzamab (Fasenra) for 3 months for free.* The end point are differences in Chest CT scans that are obtained before initiation of Fasenra and at the end of the study.

3. Idiopathic Pulmonary Fibrosis.

- a. A new novel drug that is used in addition to the standard of care (i.e. Ofev or Esbriet).

4. Bronchiectasis patient with frequent exacerbations.

- a. Phase 3 trial looking at a novel drug, *brensocaticib*. Randomization will mean that $\frac{2}{3}$ of the studied patients will receive the active drug.

Thank you for your consideration. Please call me or my office to refer a patient.
